AutoCAD is used by architects, engineers, designers, and other professionals for various purposes. It is part of the Autodesk product line and competes with SketchUp, CorelDRAW, Microstation, MicroCAD, and other desktop CAD applications. This article discusses the essential features of AutoCAD software and reviews AutoCAD 2018. Many features of AutoCAD are intended to make it easier to use for architects and other professionals, with the result that it is not as easy to use for casual software users. The drawing tools and commands in AutoCAD are similar to those in AutoCAD LT software (an entry-level version). The difference is that it is not necessary to create an object before starting to draw it. For example, you can draw a line by simply clicking on the mouse and dragging the cursor. AutoCAD LT software requires you to create an object before you can use any drawing tools or commands. You can easily draw a line in AutoCAD by selecting and pressing the down arrow key to enter the Shape Selection mode. This drawing (based on the drawing of the Radio City Music Hall by architect Santiago Calatrava) uses a simple linear pattern to form the walls of the Radio City Music Hall. In AutoCAD 2018, you can use a Line Style Object (lo) to draw a line. This object is similar to a shape object, but it is simpler. Creating a Line Style Object To create a Line Style Object, open the Line Style dialog box (locate it on the Home tab), select the Pencil item, and click the right arrow key to move the cursor to the last drop-down menu item. The dialog box will look similar to the following illustration. In the next screen, the Line Style Object is selected and the Pencil tool is activated. You can use the Shift key to add a space between the lines, and the Enter key to end the object. Note: To create a Line Style Object in older versions of AutoCAD, select the Line Style Object from the Draw menu. Creating a Layer with a Line Style Object To create a layer with a Line Style Object, select the Line Style Object from the Line Style Objects pane, click the New Layer icon, and enter a new name for the new layer (see the illustration below). In the next screen, the Line Style Object is highlighted, and the cursor is located over

Intraductal papillary neoplasm of the bile duct (IPNB) has a high incidence of local recurrence after endoscopic resection. However, the cell proliferation properties of IPNB and their relationship with survival have not been well defined. The purpose of this study is to assess the potential prognostic significance of Ki-67 and c-kit protein expression in IPNB. A total of 91 patients diagnosed with IPNB between January 2006 and December 2013 were reviewed. All resected specimens were stained for Ki-67 and c-kit protein expression by immunohistochemistry. The Kaplan-Meier method was used to analyze the correlations between Ki-67 and c-kit protein expression and clinicopathological parameters. By univariate analysis, we found that increased Ki-67 expression (P Share This Story! Ten years
