Do you want to download Instagram videos? Instagram Video Downloader is the tool that can get you what you need. Intuitive interface Due to the UI's simple build, the download process isn't a big deal. All you need for downloading a clip is its URL, which has to be copied into the reserved upper panel. If you need to change the file type or choose a different quality, you can use the two combo menus located near the "Start Download" button. Furthermore, if you want to check a file's ETA or

completion status, you can verify the integrated console located at the bottom part of the UI. Batch download capabilities For those with multiple videos to snag, but no patience or time to do it, the app has a quick solution. To download more than one video at a time you have to paste the URLs one under each other. If you are creating a continuous line of links, the app won't work, so make sure you are listing them properly. A downside to the batch download would be the lack of a canceling function. To be more precise, if a user is creating a list of somewhere around 15-20 URLs and

the download is started, they won't be able to pause or cease the process unless it's over, or Task Manager is used. All in all Instagram Video Downloader can help you obtain video or audio files from Instagram in a quick and easy way. During the testing process, there were no crashes or errors and no freeze was noticed while batch downloading. What's New in This Release: ·Added support for Android Pie's improved stability and performance Description: Do you want to download Instagram videos?
